

## Section D-6 Fire Performance of Exterior Wall Assemblies

### D-6.1. Scope

#### D-6.1.1. Exterior Wall Assemblies

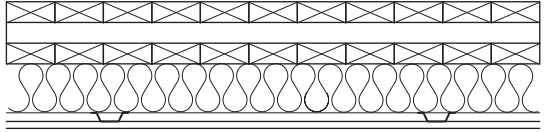

Table D-6.1.1. shows construction specifications for exterior wall assemblies that are deemed to satisfy the criteria of Clause 3.1.5.5.(1)(b) when tested in accordance with CAN/ULC-S134, “Fire Test of Exterior Wall Assemblies.” These exterior wall assemblies are suitable for use in buildings permitted to be of encapsulated mass timber construction.

**Table D-6.1.1.**  
Construction Specifications for Exterior Wall Assemblies that Are Deemed to Satisfy the Criteria of Clause 3.1.5.5.(1)(b) when Tested in Accordance with CAN/ULC-S134

Wall Number	Structural Members	Absorptive Material	Sheathing	Cladding	Design
EXTW-1	38 mm × 89 mm wood studs spaced at 400 mm o.c. <sup>(1)(2)</sup>	89 mm thick rock or slag fibre in cavities formed by studs <sup>(3)(4)</sup>	--	12.7 mm thick fire-retardant-treated plywood siding <sup>(5)</sup>	 GG00531A
EXTW-2	38 mm × 140 mm wood studs spaced at 400 mm o.c. <sup>(1)(2)</sup>	140 mm thick rock or slag fibre in cavities formed by studs <sup>(3)(4)</sup>	Gypsum sheathing ≥ 12.7 mm thick	Noncombustible exterior cladding	 GG00530A
EXTW-3	38 mm × 140 mm wood studs spaced at 400 mm o.c. <sup>(1)(2)</sup>	140 mm thick rock or slag fibre in cavities formed by studs <sup>(3)(4)</sup>	15.9 mm thick fire-retardant-treated plywood <sup>(6)</sup>	Noncombustible exterior cladding	 GG00532A
EXTW-4	38 mm × 140 mm wood studs spaced at 600 mm o.c. <sup>(1)(7)</sup> attached to cross-laminated timber (CLT) wall panels ≥ 38 mm thick <sup>(8)</sup>	140 mm thick glass, rock or slag fibre in cavities formed by studs <sup>(3)</sup>	Gypsum sheathing ≥ 12.7 mm thick	Noncombustible exterior cladding	 GG00533A

**Table D-6.1.1. (continued)**

**Construction Specifications for Exterior Wall Assemblies that Are Deemed to Satisfy the Criteria of Clause 3.1.5.5.(1)(b) when Tested in Accordance with CAN/ULC-S134**

EXTW-5	89 mm horizontal Z-bars spaced at 600 mm o.c. attached to CLT wall panels ≥ 105 mm thick <sup>(8)</sup>	89 mm thick rock or slag fibre in cavities formed by Z-bars <sup>(3)(4)</sup>	=	Noncombustible exterior cladding attached to 19 mm vertical hat channels spaced at 600 mm o.c.	 <p style="text-align: right;">GG00534A</p>
--------	---	---	---	--	---

Notes to Table D-6.1.1.:

- (1) The stated stud dimensions are maximum values. Where wood studs with a smaller depth are used, the thickness of absorptive material in the cavities formed by the studs must be reduced accordingly.
- (2) Horizontal blocking between the vertical studs or horizontal stud plates must be installed at vertical intervals of at most 2 324 mm, such that the maximum clear length between the horizontal blocking or stud plates is 2 286 mm.
- (3) The absorptive material must conform to CAN/ULC-S702, "Mineral Fibre Thermal Insulation for Buildings."
- (4) The absorptive material must have a density not less than 32 kg/m<sup>3</sup>.
- (5) The fire-retardant-treated plywood siding must conform to the requirements of Article 3.1.4.5. and must have been conditioned in conformance with ASTM D 2898, "Accelerated Weathering of Fire-Retardant-Treated Wood for Fire Testing," before being tested in accordance with CAN/ULC-S102, "Test for Surface Burning Characteristics of Building Materials and Assemblies."
- (6) The fire-retardant-treated plywood must conform to the requirements of Article 3.1.4.5.
- (7) Horizontal blocking between the vertical studs or horizontal stud plates must be installed at vertical intervals of at most 2 438 mm, such that the maximum clear length between the horizontal blocking or stud plates is 2 400 mm.
- (8) A water-resistant barrier may be attached to the face of the CLT wall panels.
